Full Time Neurorehabilitation Technician

NeuroFeedback Training
Neurofeedback Training helps patients outline and execute the essential steps necessary in order to recover from the disease of substance abuse, as well as other psychological problems.

EEG Brain Mapping
An all-inclusive, computer-generated analysis of your brain’s electrical activity in order to pinpoint any brain activity that is outside of the norm and get to the root of any underlying problem.

Job Description:
Neurofeedback Technician (Full-time) Perform QEEG brain evaluations, Neurofeedback and Loreta Z Score Neurofeedback in our clinics. Responsible for doing psychiatric evaluations and managing continuing care patients within a very dynamic, integrative assessment and treatment model. Needs experience in functional brain imaging, qEEGs, and functional medicine tools as part of a larger, whole-person approach to patient assessment and treatment.

Roles and Responsibilities:
- Administers qEEG guided neurofeedback brain training and brain entrainment to our patients with substance abuse, emotional, learning, and stress related disorders
- Assumes responsibility for the execution of the Neurofeedback training plan
- Coordinates scheduling of appointments and keeps track of sessions delivered to plan
- Selects neurofeedback protocols based on patient’s qEEG brain map
- Adjusts patient’s neurofeedback protocols to maximize effectiveness of training
- Manages patients and their progress
- Keeps track of patient’s dietary changes affecting their brain and changes in medication use
- Tracks, charts and monitors patient’s training sessions and symptomatic progress
- Reviews and charts patient progress and training effectiveness within Sunwave EMR

Required skills, abilities and education:
- Neurofeedback Certification Preference will be given to those with BCIA certification or willing to complete certification requirements within 6 months of hire.
- AA/BA/BS or pursuing AA/BA/BS in psychology or counseling
- Aligned with our integrative practice philosophy and functional medicine
- Excellent listening skills
- Strong verbal and written communication skills
- Excellent interpersonal relationship, facilitation, and service management skills.
- Can work independently and loves responsibility
- Strong multi-tasking skills
- Strong organizational and planning skills
- Feels comfortable with hands-on therapy
- Computer savvy and proficient in navigating Windows environments and applications such as MS Office
- Other skills and abilities desired:
  - Experience working with adults with neurological or neurodevelopmental conditions.
  - Understanding of neurophysiology and neuroanatomy
  - Understanding of how nutrition affects the brain
  - Understanding of herbs and psychopharmacology
  - Understanding of EEG brain waves and functions
  - Understanding of or experience with qEEG brain mapping
  - Understanding of or experience with qEEG guided neurofeedback brain training
